

# Hosting Service

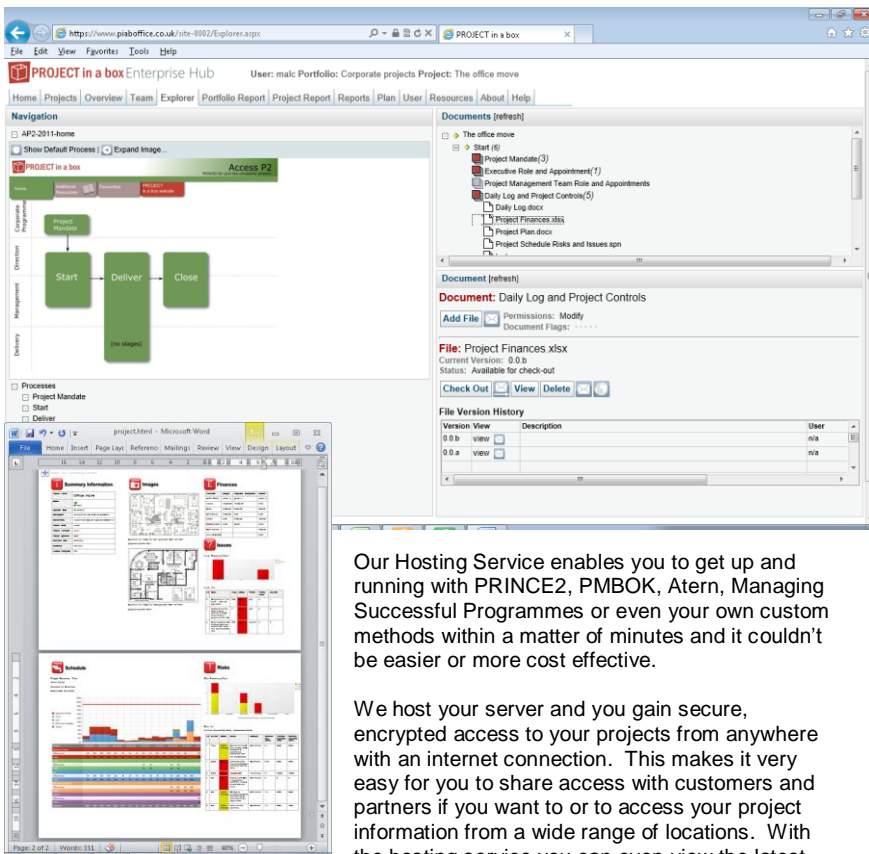

*We host and support your Small Team or Enterprise Edition, you just select the number of users you want and how long you want to use it for and you can start deriving the benefits of using PROJECT in a box almost immediately.*

## Just three simple steps to implement PRINCE2® and MSP®!

1. Purchase the STE or EE licences you require
2. Purchase a standard hosting package or request a custom hosting arrangement
3. Connect securely over the internet to your server which we host for you

Standard Hosting packages start from just £500 for six months.

Our Hosting Service enables you to get up and running with PRINCE2, PMBOK, Atern, Managing Successful Programmes or even your own custom methods within a matter of minutes and it couldn't be easier or more cost effective.

We host your server and you gain secure, encrypted access to your projects from anywhere with an internet connection. This makes it very easy for you to share access with customers and partners if you want to or to access your project information from a wide range of locations. With the hosting service you can even view the latest project information from a smart phone.

We include a transition service so if you want to bring the system onto your own servers we will help and guide you through that process.

This makes the hosting service great for customers who want to be up and running quickly and provides breathing space while their internal

IT is prepared. Just a few of the reasons people go for PROJECT in a box with the hosting service:

### ***"My internal IT supplier is a barrier"***

The most common reason customers give for using the hosting service is that they want to have the system and buying it to host in-house would be too difficult, time-consuming or expensive with their internal IT supplier. So, we host the server, set it up and support it for you and all you need is the client software which can be operated from a USB stick or from your My Documents without the need for an install. So if you don't have admin rights for the PC you should still be able to use PROJECT in a box.

Should things change later on and you want to migrate onto an in-house server we will help you do this. It is all part of the service.

### ***"We want to access our projects from anywhere"***

All you need is an internet connection and a browser to view latest project documents, search content and see published reports via the Enterprise Hub, you can even do this from a windows mobile device like a smart phone.

To use the rich .NET client you will need a PC with .NET framework V2.0 already installed.

### ***"We want to give stakeholders and partners controlled access to our projects"***

Just create a user account for the person, assign them a licence to suit the type of access you want them to have (from your STE or EE licence set) and set up permissions for what they can see and do. This can be adjusted down to each document within each project so you can give each user as much or as little access and control as you want. They can then access just like you over the web from their device and via their interface of choice, browser or .NET Client.

### ***"We don't think we have the IT infrastructure or know how to make the most of PROJECT in a box"***

Actually you need very little of either to use PROJECT in a box but if you aren't confident with then we host it and do all the set up, back ups and upgrades for you leaving you free to concentrate on delivering your projects. This makes the hosting service attractive to even the smallest organisation allowing them to gain access to professional systems and capabilities.
